

# The Method Behind Producer Support Calculations

**Olga Melyukhina**  
**Trade and Agriculture Directorate**

**Evolving Agricultural Policies in a Changing World**  
**Washington D.C., 19-20 January 2010**

# Outline

- **Why measure support?**
- **Key concepts**
- **OECD support indicators as a system**
- **Classification of producer support**

# Purpose of support indicators

**Support indicators were developed to:**

- **monitor and evaluate developments in agricultural policies**
- **have a common base for policy dialogue, domestically and internationally**
- **provide input into policy impact analysis**

# Key concepts : What policies are considered?

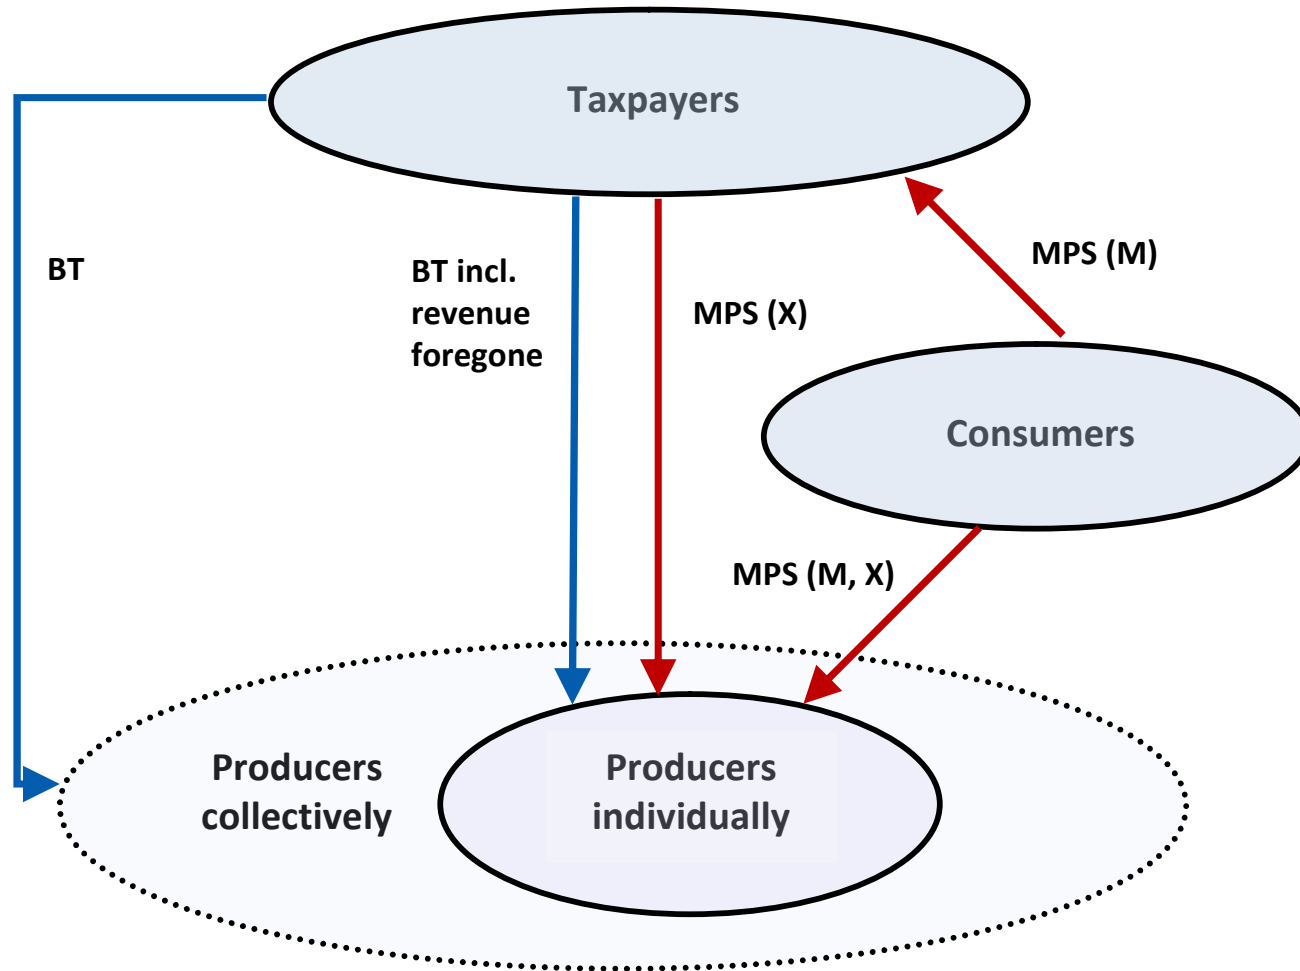

- What policies are considered in the calculations? – several conventions:
  - that generate transfers to agricultural producers
  - objectives or economic impacts of policies are not considered
  - general policies not considered, even if they generate transfers to agricultural producers

# Key concepts : Policy transfers by economic groups

- Policy transfers – building blocks of indicators
  - Concept of transfer: source and recipient:
    - Agricultural producers
    - Consumers (first-stage buyers)
    - Taxpayers
  - Support indicators – different ways to look at policy transfers and to express their relative levels
- Recipients**   
**Source**  
**Source**

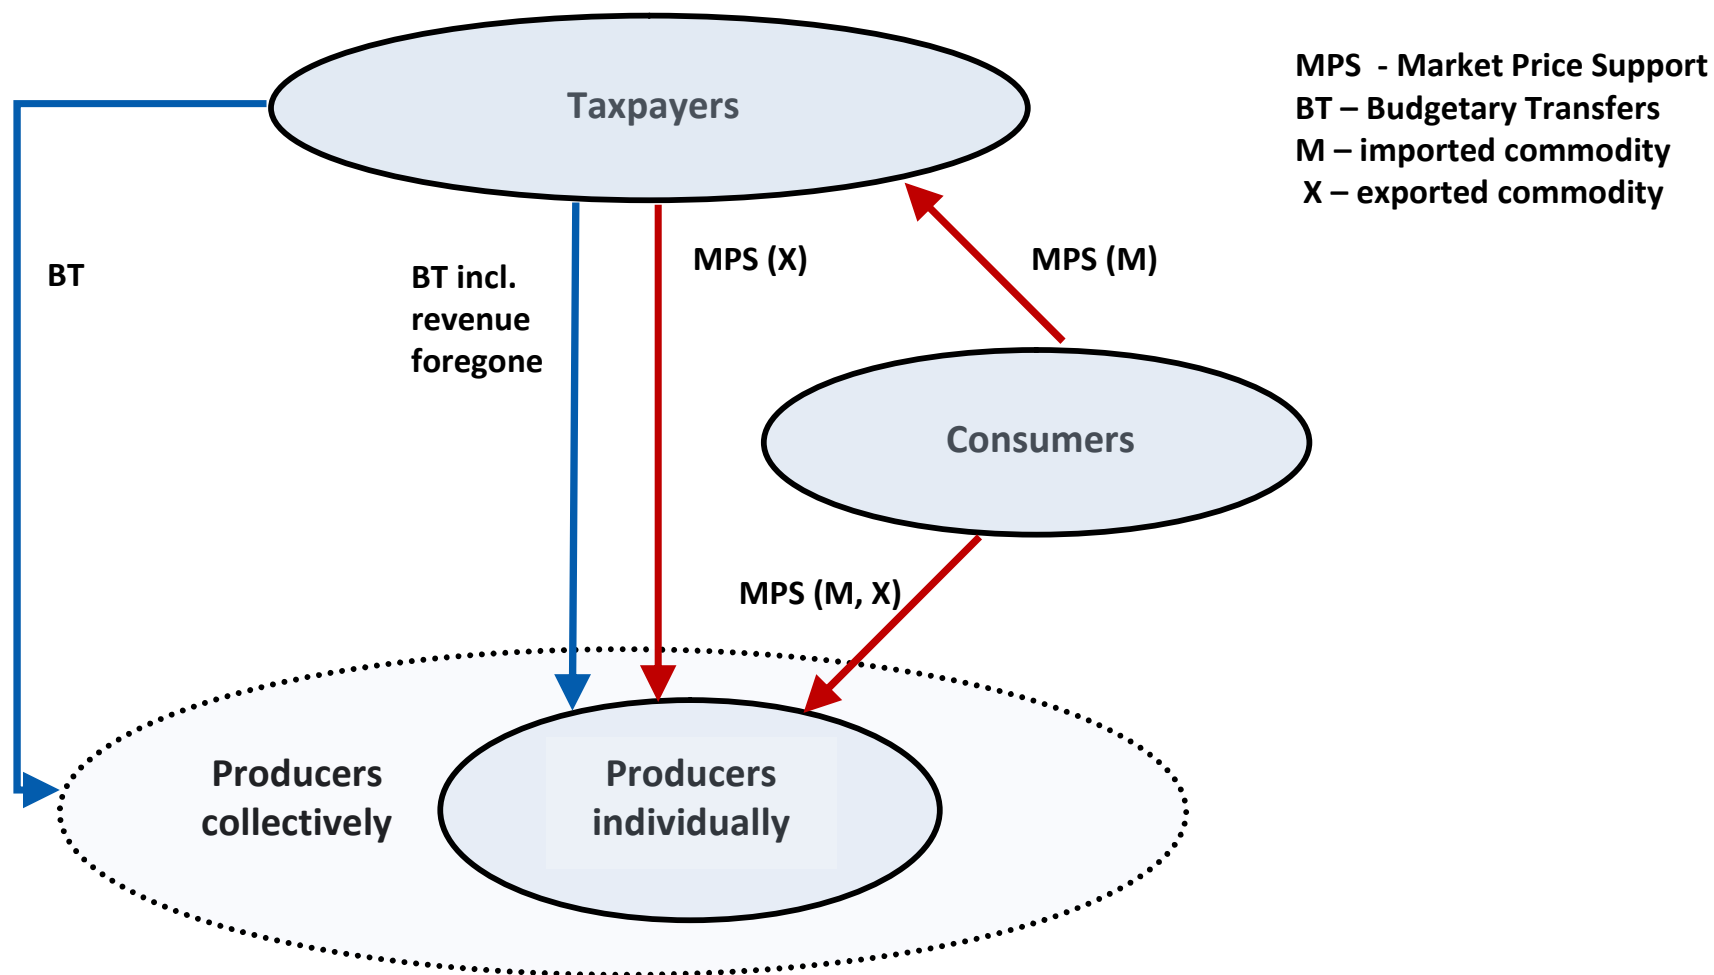

# Key concepts: Flows of policy transfers

MPS - Market Price Support  
BT - Budgetary Transfers  
M - imported commodity  
X - exported commodity

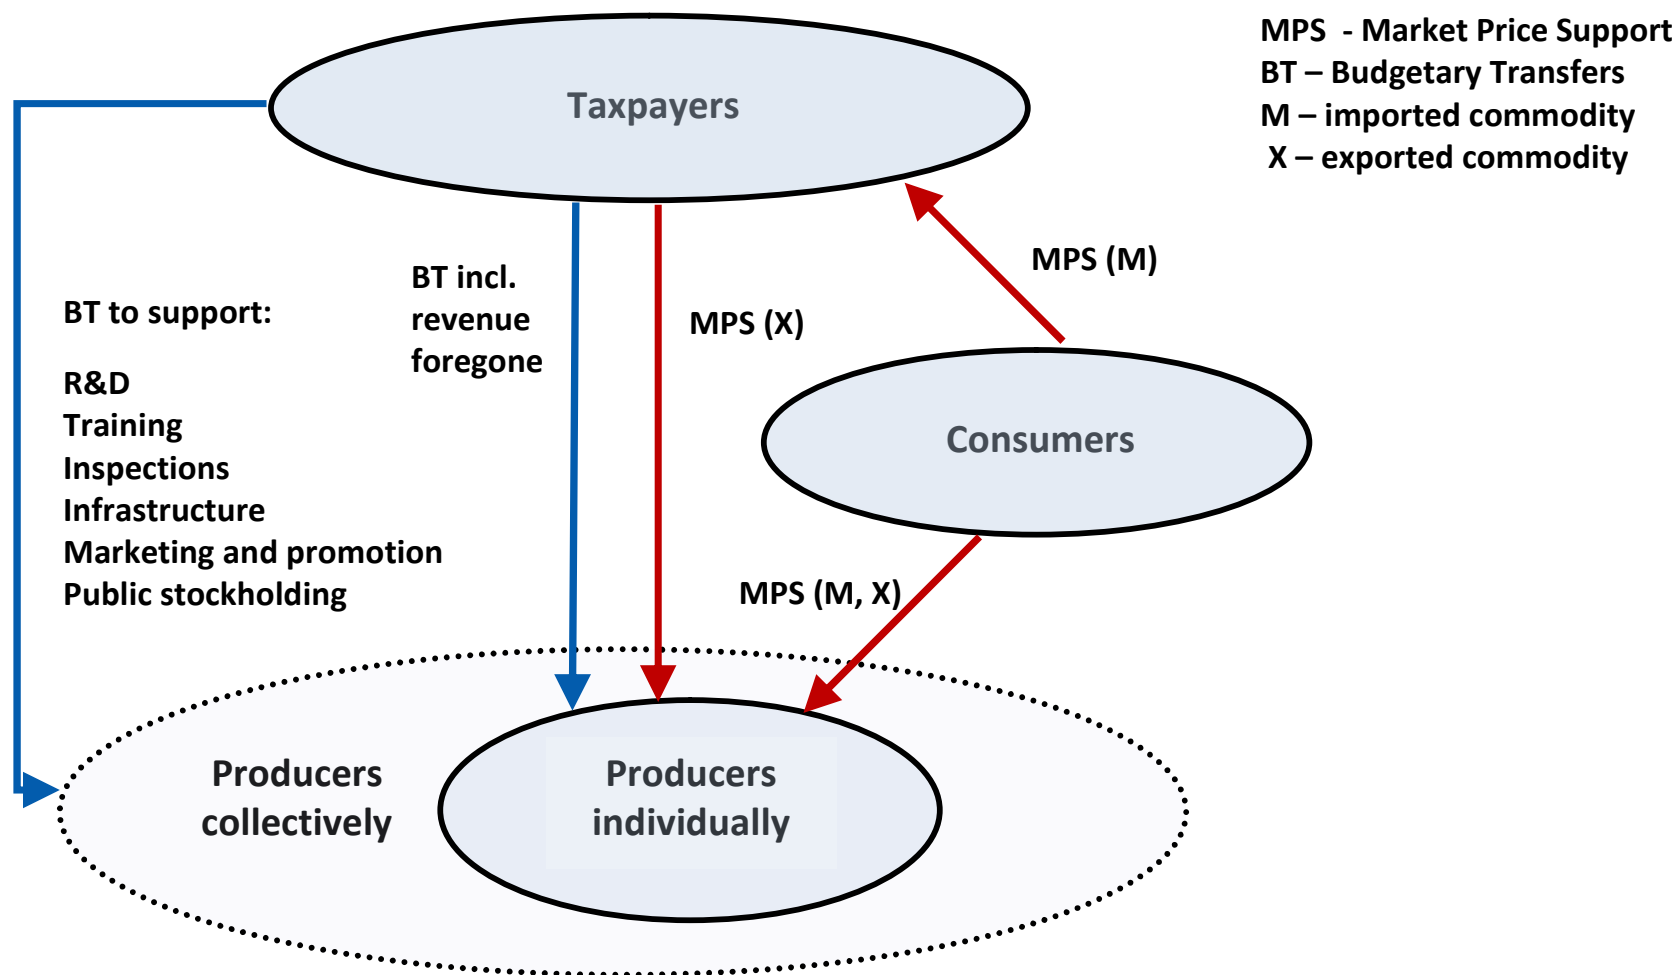

# Key Support Indicators: Producer Support Estimate (PSE)

**Producer Support Estimate (PSE):** the annual monetary value of gross transfers from consumers and taxpayers to agricultural producers, measured at the farm gate level, arising from policy measures that support agriculture, regardless of their nature, objectives or impacts on farm production or income.

# Key Support Indicators: General Services Support Estimate (GSSE)

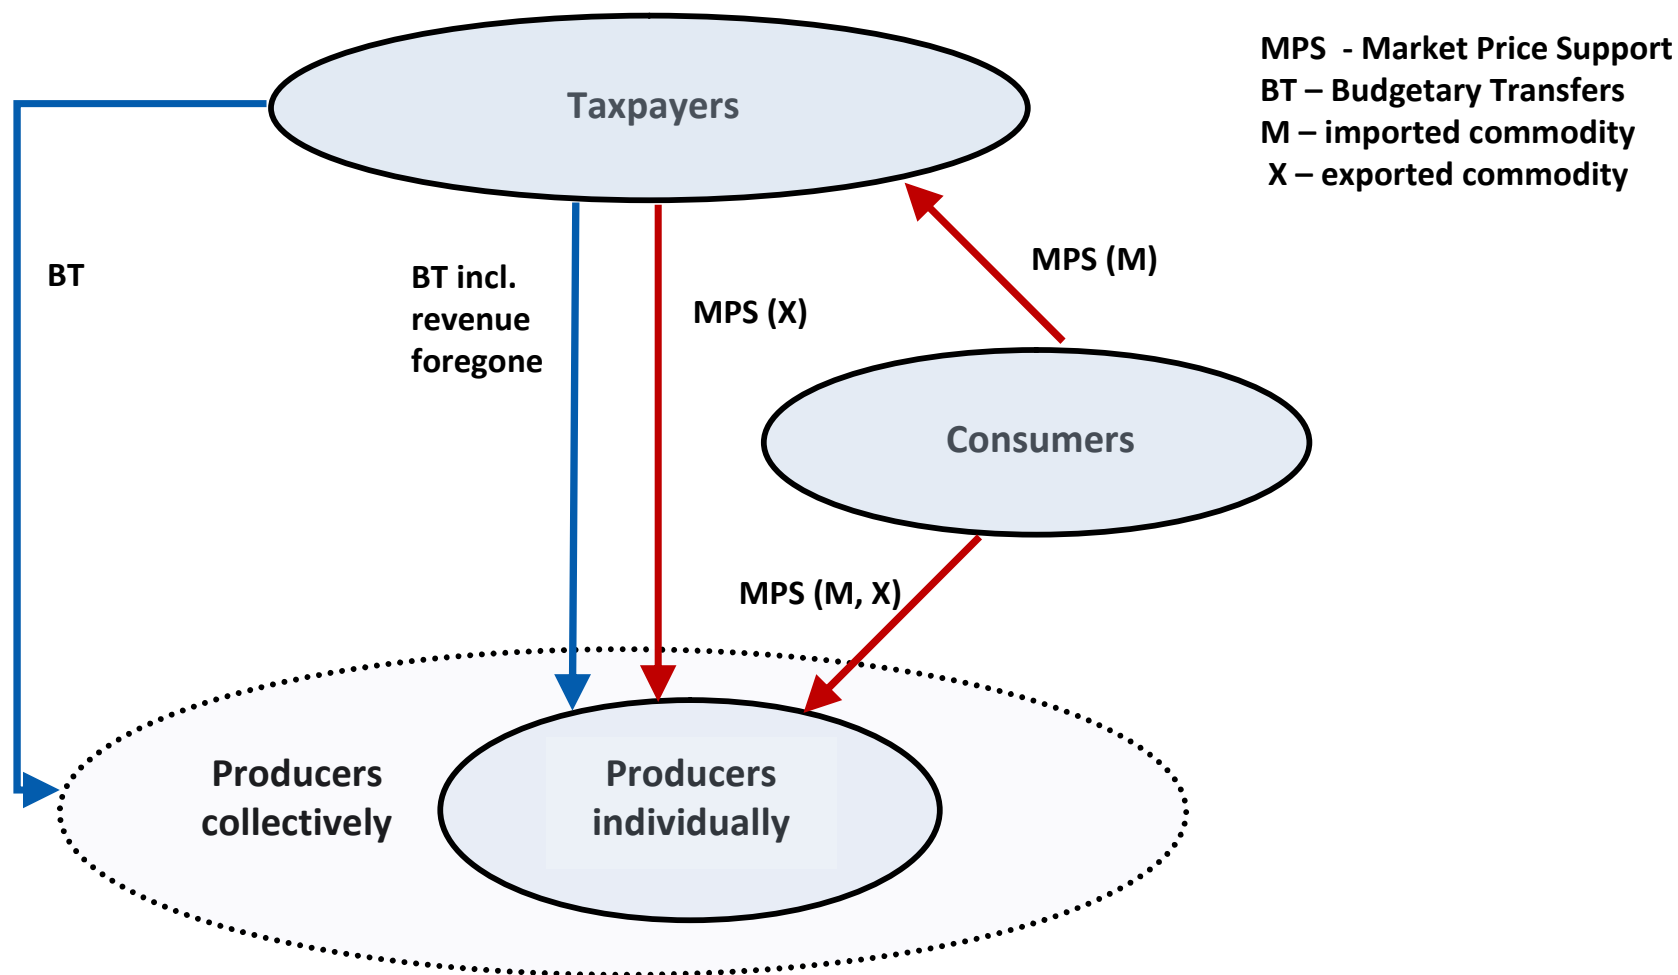

**General Services Support Estimate (GSSE):** the annual monetary value of gross transfers to general services provided to agricultural producers collectively (such as research, development, training, inspection, marketing and promotion), arising from policies that support agriculture regardless of their nature, objectives and impacts on farm production, income, or consumption. The GSSE does not include any transfers to individual producers.

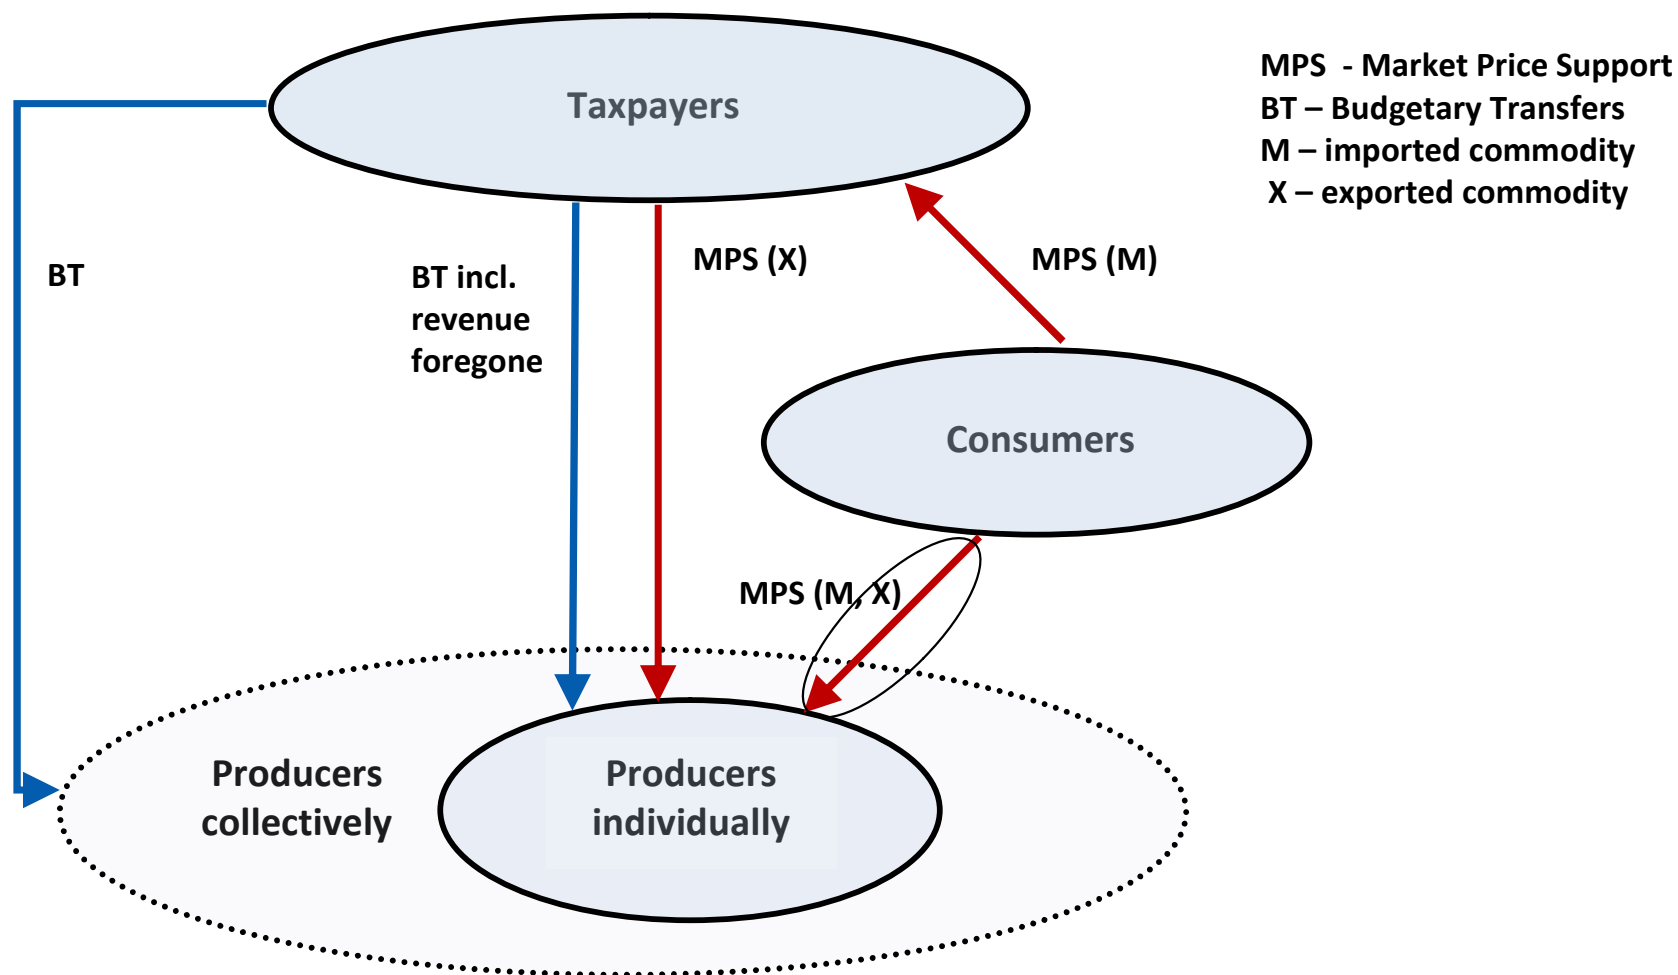

# Key Support Indicators: Consumer Support Estimate (CSE)

**Consumer Support Estimate (CSE):** the annual monetary value of gross transfers from (to) consumers of agricultural commodities, measured at the farm gate level, arising from policy measures that support agriculture, regardless of their nature, objectives or impacts on consumption of farm products.

# Key Support Indicators: Total Support Estimate (TSE)

**Total Support Estimate (TSE):** the annual monetary value of all gross transfers from taxpayers and consumers arising from policy measures that support agriculture, net of the associated budgetary receipts, regardless of their objectives and impacts on farm production and income, or consumption of farm products.

## Key Support Indicators : Relative indicators

- **%PSE: PSE as a share of Gross Farm Receipts**
- **%GSSE: as a share of Total Support Estimate**
- **%CSE: as a share of consumption expenditure**
- **% TSE: as a share of GDP**
- **NPC: gap between domestic and border price as a ratio of the border price**

# PSE composition: Market Price Support and Budgetary Transfers

OECD, PSE/CSE database

# PSE: Classification of policies

- It is important to know “how” support is provided
- Support delivered in different ways may have different effects on production, trade and farm income
- PSE classification distinguishes different ways to deliver support
  - “decoupling of support” is the underlying concept

# PSE classification

<b>Output</b>	A. Support based on commodity output	<b>Production required</b>	
<b>Inputs</b>	B. Payments based on input use		
<b>Factors and income</b> Area (A) Animals (An) Receipts (R) Income (I)	C. Payments based on A/An/R/I		Current A/An/R/I
	D. Payments based on A/An/R/I	Production required	Non-current A/An/R/I
	E. Payments based on A/An/R/I	Production not required	Non-current A/An/R/I
<b>Non-commodity criteria</b>	F. Payments based on non-commodity criteria	<b>Production not required</b>	
	G. Miscellaneous payments		

# PSE classification

Output	A. Support based on commodity output	Current parameters	
Inputs	B. Payments based on input use		
Factors and income	C. Payments based on A/An/R/I		
Area (A)	D. Payments based on A/An/R/I	Production required	Current A/An/R/I
Animals (An)			
Receipts (R)			
Income (I)			
Non-commodity criteria	E. Payments based on A/An/R/I	Production not required	Non-current A/An/R/I
	F. Payments based on non-commodity criteria	Non-current parameters	
	G. Miscellaneous payments		

# Composition of the PSE: policy categories

%PSE

A. Commodity output

C. Current A/An/R/I, production required

E. Non-current A/An/R/I, production not required

G. Misc

B. Input use

D. Non-current A/An/R/I, production required

F. Non-commodity criteria

OECD, PSE/CSE database

## PSE Classification: other criteria

**PSE classification also tells whether support:**

- **involves limits on production/payments or not**
- **provided with variable/fixed payment rates**
- **imposes any kind of input constraints or not**
- **provided to a single commodity only, group of commodities, or all commodities**
- **etc.**

## Concluding remarks

- Support indicators represent a comprehensive account of policy transfers
- Each indicator highlights specific dimension of support, indicators are complementary and form a system
- PSE/CSE database is a rich source of policy information, internationally comparable and regularly updated
- Indicators as such do not measure policy effects but are a key input into policy analysis

# Thank You

# Composition of the PSE: commodity specificity of support

OECD, PSE/CSE database

# Origin of OECD support indicators

- Crisis in international agricultural trade in late 1970s and early 1980s...
  - ...yet no agreed way to measure, compare and evaluate the trade effects of support
  - In 1982, ministers asked the OECD ...
- “...to analyse the approaches and methods for a balanced and gradual reduction of protection for agriculture and the fuller integration of agriculture within the open multilateral trading system”
